

The American College of Epidemiology's Annual Meeting

Tucson, Arizona • September 14-16, 2008

The Dawn of Evolutionary Epidemiology

Applying evolutionary theory in an epidemiologic context.

- What role should/can modern Darwinian theory play in epidemiology?
- How would we do epidemiology differently and better if we based it more firmly on modern Darwinian theory?
- How can we apply evolutionary theory to increase our understanding of disease etiology for both infectious and non-infectious diseases?
- What can evolutionary theory contribute to social epidemiology?

**We propose to tackle these and other challenges to the discipline
at the 2008 Annual Meeting.**
