Perinatal outcomes a roadmap to good health Can we get there from here?

American College of Epidemiology 2014 Annual Meeting Silver Spring, MD September 8, 2014

- Maternal chronic conditions short and long-term consequences
 - Pauline Mendola, Investigator, Eunice Kennedy Shriver National Institute of Child Health and Human Development
- Fetal programming how much is "over" before it begins?
 - Edwina Yeung, Investigator, Eunice Kennedy Shriver National Institute of Child Health and Human Development
- Using research to drive improvements in perinatal health at the state and national level
 - Reem Ghandour, Director of the Division of Epidemiology, Maternal and Child Health Bureau, Health Resources and Services Administration

Maternal chronic conditions short and long-term consequences

Perinatal outcomes – a roadmap to good health Can we get there from here?

American College of Epidemiology 2014 Annual Meeting September 8, 2014

Pauline Mendola, PhD

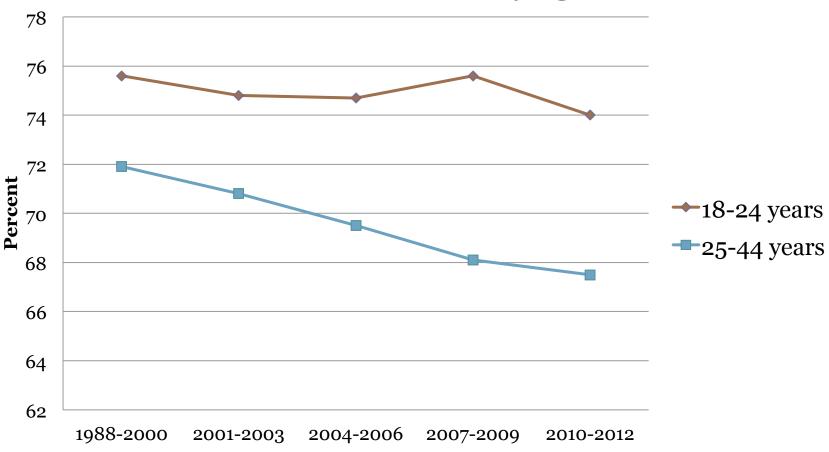

Eunice Kennedy Shriver National Institute of Child Health and Human Development

Overview

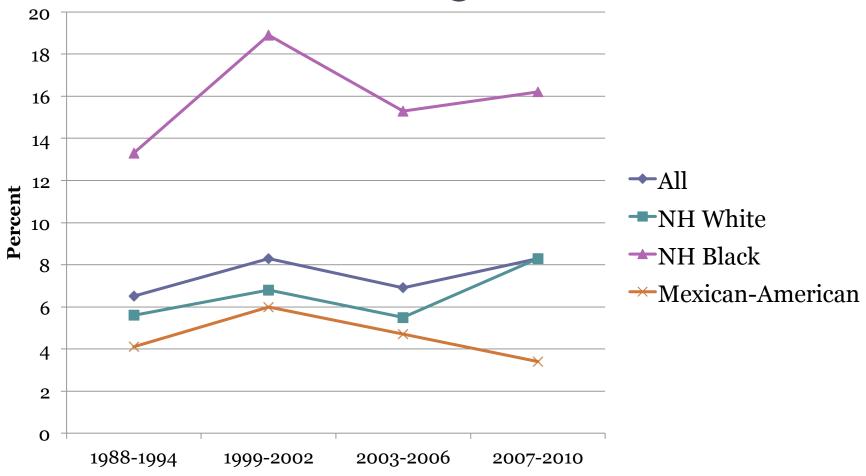

- American women of reproductive age
 - Increasing rates of chronic disease
 - Changes in the obstetric population
- Chronic diseases increase risk for adverse neonatal and obstetric outcomes
 - Preterm delivery
 - Hypertension
- Long-term consequences for mothers and children

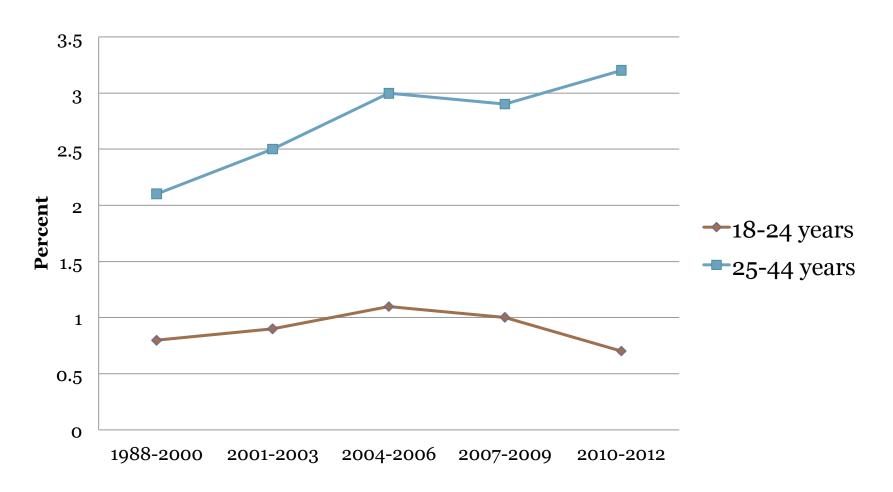

US women who rate their health as excellent or very good

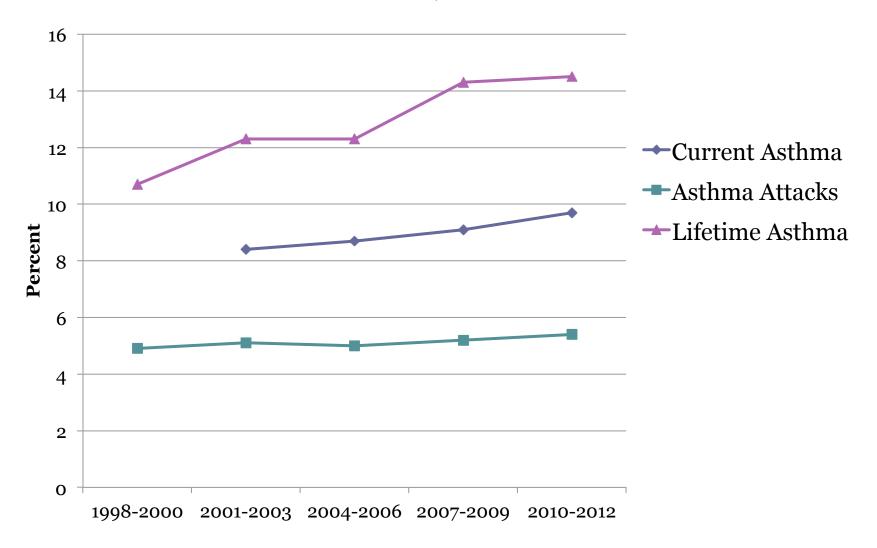

Diagnosed hypertension among US women aged 20-45

Diagnosed diabetes among US women

Increases in asthma, US women 18-44

Changes in the obstetric population associated with increased risks

Age

Obesity

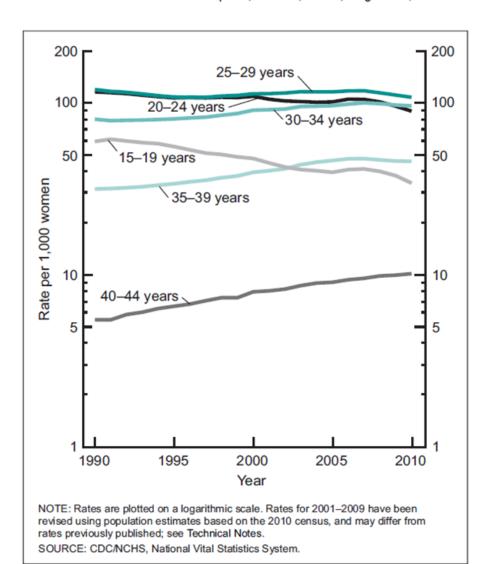

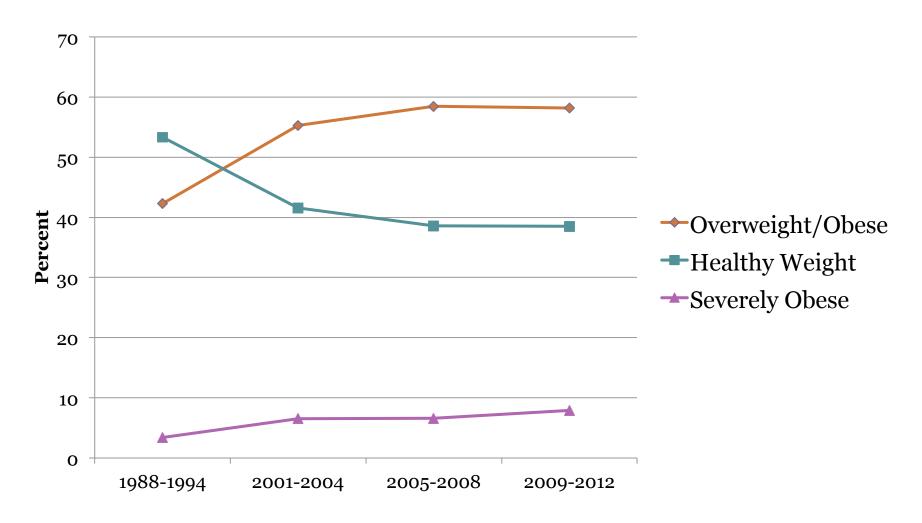

Birth rates continue to rise for older mothers

6 National Vital Statistics Reports, Vol. 61, No. 1, August 28, 2012

Weight among US women 20-44

Increased prevalence of chronic disease, older and overweight mothers can lead to complications

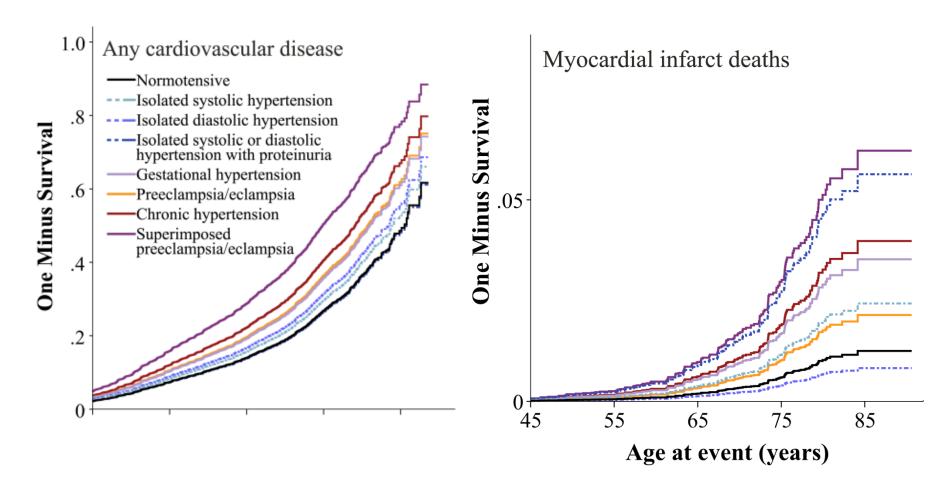

hypertensive disorders in pregnancy and preterm birth

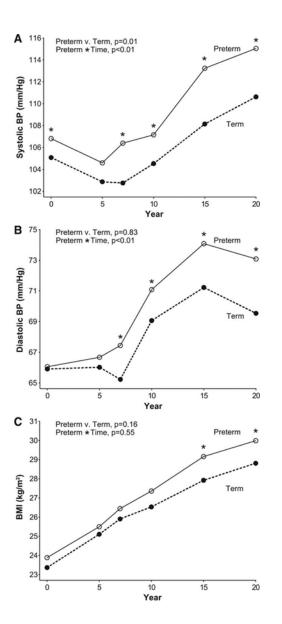

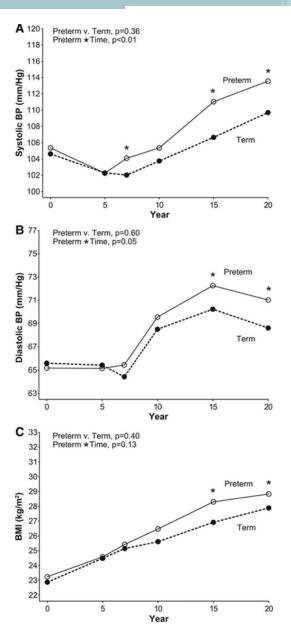

Long-term effects for mom

Männistö, T.; Mendola, P.; Vääräsmäki, M.; Pouta, A.; Järvelin, M.-R.; Hartikainen, A.-L.; Suvanto, E. Elevated blood pressure in pregnancy and subsequent chronic disease risk. Circulation, 127:681-90, 2013.

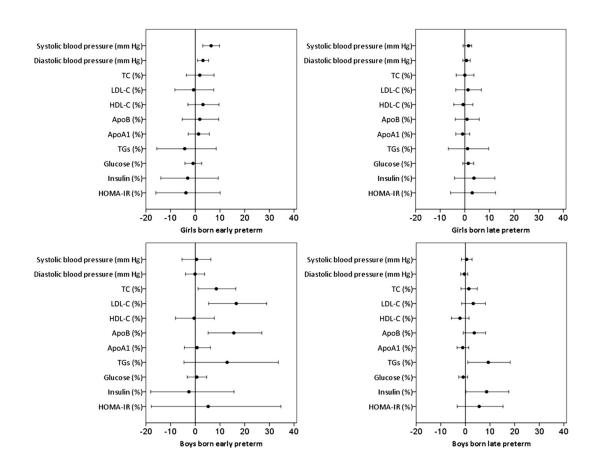

Mothers who have preterm deliveries have higher blood pressure and BMI in later life

Catov, J.M.; Lewis, C.; Lee, M.; Wellons, MF; Gunderson EP. Preterm birth and future maternal blood pressure, inflammation and intimal-media thickness: The CARDIA study. Hypertens 61:641-6, 2013.

Shorter gestation also has long-term effects on children

Perinatal health - a *family* health issue with population level consequences

- Social and medical factors interrelate
- Maternal chronic disease in pregnancy is on the rise
 - 25% of twin pregnancies
 - More than 15% of singleton pregnancies
- Better primary care and good health behavior may be the best foundation for healthy pregnancy with long term consequences for population health
